intelligence has long been considered to be a feature unique to human beings giving us the capacity to imagine to think to deceive to make complex connections between cause and effect to devise elaborate stategies for solving problems however like all our other features intelligence is a product of evolutionary change until recently it was difficult to obtain evidence of this process from the frail testimony of a few bones and stone tools it has become clear in the last 15years that the origins of human intelligence can be investigated by the comparative study of primates our closest non human relatives giving strong impetus to the case for an evolutionary psychology the scientific study of the mind

a nobel prize winner dr szent györgyi concerns himself with the underlying forces and conditions that have prevented the realization of the higher possibilities of the american dream and by extension of all mankind he addresses himself especially to the youth of the world in his attempt to show how man the more he progresses technologically seems the more to regress psychologically and socially until he resembles his primate ancestors in a state of high schizophrenia the fundamental question asked by this book is why is it that most of the scientific research that is done to elevate human life serves in the end to destroy it that this phenomenon exists is unarguable how to alter it is the problem the author tackles he finds the possibility indeed the instrument of our survival in our youth dr szent györgyi calls upon the youth the world over to organize and

the well dressed ape aka homo sapiens is a strange mammal it mates remarkably often and with unprecedented affection with comparable enthusiasm it will eat to the point of undermining its own health unlike any other animal in the wild the human marks its territory with doors fences and garden gnomes yet if it becomes too isolated it becomes depressed it thinks of itself as complex intelligent and in every way both different from and superior to other animals but is it really in this riveting and revealing field guide to the human animal hannah holmes surveys the evidence she shows that monogamy is mostly overrated female birds that cheat on their partners have bigger brains and female chimps go out on the equivalent of girls nights out that while humans can contact each other using complex lumps of plastic spiders can send each other messages by plucking web strings and some fish communicate by clicking their teeth or strumming body parts and that most animals lie the baby baboon is notoriously devious and cries wolf to avoid its mother's wrath the well dressed ape is an entirely engrossing and eye opening study of that oddest and yet most engaging of primates ourselves it will change the way you look at yourself and other animals forever

executive summary tourism is often proposed 1 as a strategy to fund conservation efforts to protect great apes and their habitats 2 as a way for local communities to participate in and benefit from conservation activities on behalf of great apes or 3 as a business a few very successful sites point to the considerable potential of conservation based great ape tourism but it will not be possible to replicate this success everywhere the number of significant risks to great apes that can arise from tourism require a cautious approach if great ape tourism is not based on sound conservation principles right from the start the odds are that economic objectives will take precedence the consequences of which in all likelihood would be damaging to the well being and eventual survival of the apes and detrimental to the continued preservation of their habitat all great ape species and subspecies are classified as endangered or critically endangered on the iucn red list of threatened species iucn 2010 therefore it is imperative that great ape tourism adhere to the best practice guidelines in this document the guiding principles of best practice in great ape tourism are tourism is not a panacea for great ape conservation or revenue generation tourism can enhance long term support for the conservation of great apes and their habitat conservation comes first it must be the primary goal at any great ape site and tourism can be a tool to help fund it great ape tourism should only be developed if the anticipated conservation benefits as identified in impact studies significantly outweigh the risks enhanced

conservation investment and action at great ape tourism sites must be sustained in perpetuity great ape tourism management must be based on sound and objective science benefits and profit for communities adjacent to great ape habitat should be maximised profit to private sector partners and others who earn income associated with tourism is also important but should not be the driving force for great ape tourism development or expansion comprehensive understanding of potential impacts must guide tourism development positive impacts from tourism must be maximised and negative impacts must be avoided or if inevitable better understood and mitigated the ultimate success or failure of great ape tourism can lie in variables that may not be obvious to policymakers who base their decisions primarily on earning revenue for struggling conservation programmes however a number of biological geographical economic and global factors can affect a site so as to render ape tourism ill advised or unsustainable this can be due for example to the failure of the tourism market for a particular site to provide revenue sufficient to cover the development and operating costs or it can result from failure to protect the target great apes from the large number of significant negative aspects inherent in tourism either of these failures will have serious consequences for the great ape population once apes are habituated to human observers they are at increased risk from poaching and other forms of conflict with humans they must be protected in perpetuity even if tourism fails or ceases for any reason great ape tourism should not be developed without conducting critical feasibility analyses to ensure there is sufficient potential for success strict attention must be paid to the design of the enterprise its implementation and continual management capacity in a manner that avoids or at least minimises the negative impacts of tourism on local communities and on the apes themselves monitoring programmes to track costs and

impacts as well as benefits is essential to inform management on how to optimise tourism for conservation benefits these guidelines have been developed for both existing and potential great ape tourism sites that wish to improve the degree to which their programme contributes to the conservation rather than the exploitation of great apes

real life encounters with orang utans chimpanzees gorillas gibbons dealing with issues about disappearing habitats studying their behaviour what we can learn about ourselves from them and talking communicating with apes

the orangutan is the most highly endangered species of great ape orangutans are threatened by deforestation poaching the illegal pet trade and the isolation and fragmentation of dwindling wild populations their conservation is impeded by certain aspects of their ecology e g a rain forest habitat and certain features of their life history e g an eight to twelve year interbirth interval added to the u s endangered species list in 1970 the orangutan is now clearly on the road to extinction the number of wild orangutans in borneo and sumatra is currently estimated to have decreased to between 12 300 and 20 571 individuals only 2 of original orangutan habitat is protected and some of these areas are now being destroyed clearly attention to ecology demography censusing rehabilitation and conservation is essential if the orangutan is to survive in the wild beyond the next century the protection of orangutans is a complex multifaceted problem involving such pressing issues as human poverty overpopulation and the economic development of southeast asia although the orangutan has been placed in appendix i of the convention on international trade in endangered species of wild fauna and flora cites more orangutans were sold illegally in taiwan between 1990 and 1993 than are

housed in all the world's zoos in the past scientific and public attention has centered on the African apes for this reason the sole Asian great ape the orangutan has been called the neglected ape

What is language and what is the nature of the intelligence that can acquire it this volume originally published in 1976 describes 10 years of research devoted to these questions the author describes his programmatic research of decomposing language into atomic constituents designing and applying training programs for teaching these to chimpanzees and for teaching chimps major human ontological categories as well as for interrogative declarative and imperative sentence forms the volume details the progress from teaching apes simple predicates such as same different to more complex predicates such as if then and the success of the program led to the following questions directly related to intelligence what made the training program effective what is the cognitive equipment of the species which enables it to learn language what does this tell us about human intelligence the answers were suggested in terms of conceptual structure representational capacity memory and the ability to handle second order relations the results of this experimentation which resulted in synonymy in some animals shed light not only on the nature of language but the nature of intelligence as well one of the earliest ape language and intelligence studies today this classic can be read and enjoyed again in its historical context

A breakthrough theory that tools and technology are the real drivers of human evolution although humans are one of the great apes along with chimpanzees gorillas and orangutans we are remarkably different from them unlike our cousins who subsist on raw food spend their days and nights outdoors and wear a thick coat of hair humans

are entirely dependent on artificial things such as clothing shelter and the use of tools and would die in nature without them yet despite our status as the weakest ape we are the masters of this planet given these inherent deficits how did humans come out on top in this fascinating new account of our origins leading archaeologist timothy taylor proposes a new way of thinking about human evolution through our relationship with objects drawing on the latest fossil evidence taylor argues that at each step of our species development humans made choices that caused us to assume greater control of our evolution our appropriation of objects allowed us to walk upright lose our body hair and grow significantly larger brains as we push the frontiers of scientific technology creating prosthetics intelligent implants and artificially modified genes we continue a process that started in the prehistoric past when we first began to extend our powers through objects weaving together lively discussions of major discoveries of human skeletons and artifacts with a reexamination of darwin s theory of evolution taylor takes us on an exciting and challenging journey that begins to answer the fundamental question about our existence what makes humans unique and what does that mean for our future

current dominant thinking and practice in the private and public sectors asserts that peoples development needs are in conflict with or mutually exclusive to the need to conserve the biosphere on which we depend consequently we are asked to either diminish development in the name of conservation or diminish conservation in the name of development efforts to identify complementary objectives or mutually acceptable trade offs and compromises indicate however that this does not always have to be the case this first volume in the state of the apes series draws attention to the evolving

context within which great ape and gibbon habitats are increasingly interfacing with extractive industries intended for a broad range of policy makers industry experts decision makers academics researchers and ngos these publications aim to influence debate practice and policy seeking to reconcile ape conservation and welfare and economic and social development through objective and rigorous analysis
